Tested here

PASS - example listing clean on 3 channels; bad listing caught 9 problems

Sample: AI-Product-Listing-Assistant-Workflow-Toolkit/product-listing-workflow/prompts/02_write_listing.md (excerp

```
Write product listings for these channels using ONLY the facts below.

<facts>{{PASTE facts.json}}</facts>
<channels>{{PASTE config/channels.json}}</channels>
<voice>{{brand voice + one example listing}}</voice>

Rules:
- Every number (size, capacity, weight, price, time) must come from facts.json, with the
  same unit. Do not convert units unless asked.
- Never use anything in do_not_claim. Use proven_claims wording carefully and do not
  strengthen it.
- No superlatives you can't prove (best, #1, perfect). No invented reviews or social proof.
- Title: lead with what it is and the main buyer keyword, then the most important
  differentiator. Respect title_max.
- Bullets (where bullets > 0): exactly that many, each starts with a 2-4 word benefit
  label, then the fact.
- Description: answer what it is, who it's for, size/fit, materials, care, what's included,
  processing time. Respect min/max words.
- Tags: respect tags_max and tag_max_chars; mix product type, material, use, recipient,
  style; no repeats of the same word in every tag.
- alt_text: describe what a photo of the product would show, factually, using the materials
  and colours given.

Return ONLY JSON: {"<channel>": {"title": "", "bullets": [], "description": "", "tags": [],
  "alt_text": "", "meta_description": ""}, ...} for each channel in channels.json (omit
  fields a channel doesn't use).
```
